1-4) Model Number

Ex)Ordered Model Name

- HPP-240HS --- 9 ~ 24V, Serial(RS-232C)
- HPP-240LS --- 5 ~ 8.5V, Serial(RS-232C)
- HPP-240LT --- 5 ~ 8.5V, Serial(TTL)

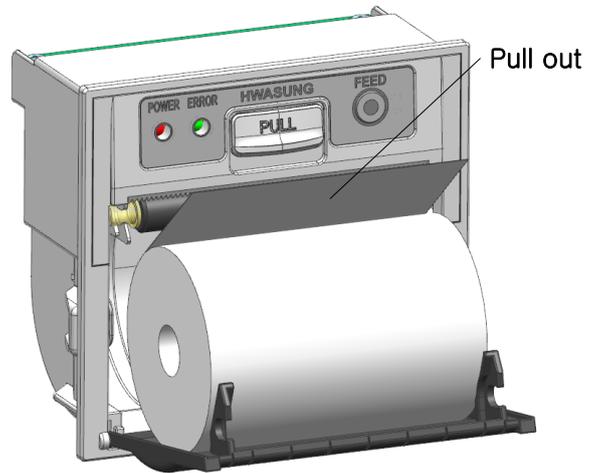

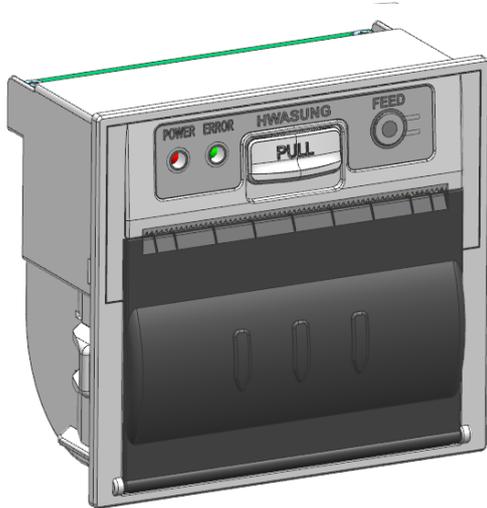

## 2. Operation

### 2-1) Paper Change

Follow the direction below for the paper change.

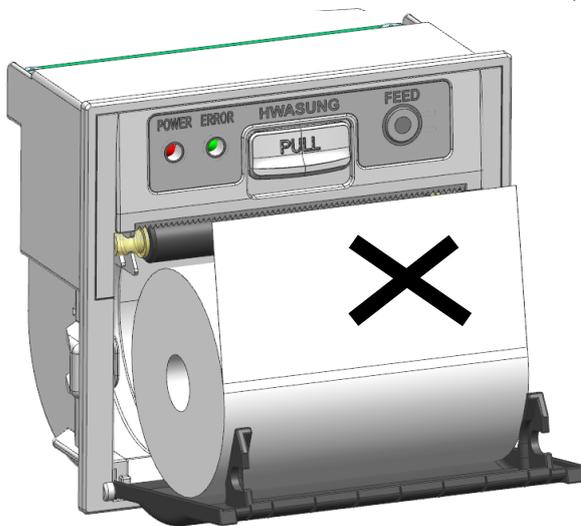

Open the cover by pressing down on the lever.

② Set the paper orientation so that the end of the paper is clear as shown in the picture.

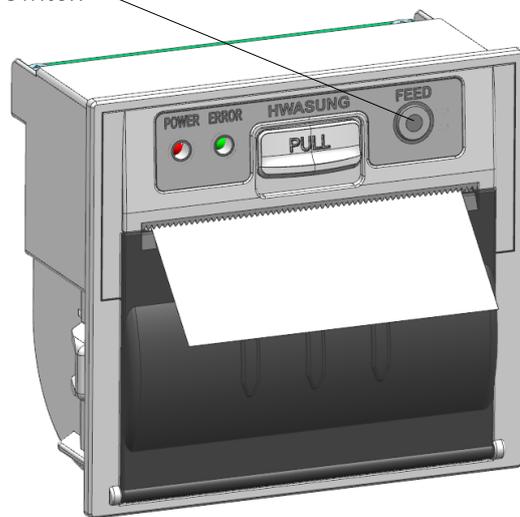

③ Paper direction should not be flipped as shown on the picture

④ Close the cover, press feedswitch, feed a certain amount, then cut it manually.

### 2-3) HEX Dump Print

Turn on the power after placing the Dip SW1 number 8 to ON position. After printing as [HEX DUMP MODE], it will print all receiving datas to 16 hexadecimal data for all receiving datas. This would be useful when developing an application because this notifies the transmission status.

- Prints if 12 digits is received.
- Data under 12 digits will print when you press the feed button.
- Control Code (Below  $1F_{16}$ ) prints as “.”
- Prints as “^” when  $80_{16}$  or above.

[Print Sample]

16 hexadecimal indicator	ASCII indicator
[HEX DUMP MODE]	
41 42 43 44 45 46 47 47 49	A B C D E F G H I
30 31 32 33 34 35 36 37 38	0 1 2 3 4 5 6 7 8
FF 1B 69	^ . i

## 2-4) On-board Update

Printer program is easily updateable from PC with the Flash Memory equipped.  
When updating, you should be well informed of the following order before executing.

- 1) Turn the power off and back on. (Dip SW manipulation is unnecessary)
- 2) Check the connectivity of Printer and the communication cable.  
(You can save time updating by using USB cable)
- 3) Run the update after configuring the model name and communication port through the provided update program.  
The ERROR LED will turn off and it will turn back on few seconds later, and the update will start when the LED starts flashing rapidly.  
Do not turn off the printer until the update is complete
- 4) Update Complete notification will display when the process is complete.  
※If the ERROR LED flashes slowly during the update, then the process is in error, so you need to terminate the update program, and repeat the process from the direction number 1) after checking the abnormalities on the device.
- 5) The printer will reset automatically after the update and will return to the ready to use status.

## 2-5) Dip Switch

Adjust the DIP switch according to the environments you are using, such as host, and port.

### 1) Dip Switch

#### a) no. 1 : DLE Command

SW1	DLE Command
ON	DLE Command ON
OFF	DLE Command OFF

#### b) no. 2,3 : Baudrate

SW2	SW3	Baud Rate(BPS)
OFF	OFF	9600
ON	OFF	19200
ON	ON	38400
OFF	ON	57600

#### c) no. 4 :

SW4	Reserve
ON	--
OFF	--

#### d) no. 5,6: Parity

SW5	SW6	Parity
OFF	OFF	None
ON	OFF	Even
ON	ON	Odd

#### e) no. 7 : Print Mode

SW7	Print Mode
ON	HEX DUMP Mode
OFF	NORMAL Mode

#### f) no. 8 : Operation Mode

SW8	Operation Mode
ON	Factory Mode
OFF	NORMAL Mode

※When shipped out, the Dip Switch is not included in the factory default and it will be set on 19200 baudrate, 8 bit, non-parity mode as a default.

## 2-5-1) Manual Configuration

1) Run the printer in initial configuration mode.

※How to run in Initial Configuration Mode

When you turn the printer's power on while pressing down on the FEED button for more than 2 seconds, the PE LED and ERROR LED will simultaneously turn on / flash and run the initial configuration mode. (9600 BPS, PARITY NONE, HARDWARE HANDSHAKE)

2)After running the initial configuration mode, it will print as the following.

```
[Menu]
 1.Baud rate
 2.Parity
 3.Flow control
 4.Hex Dump Mode
 5.Print Density
 6.Auto Melody
 7.Cut Mode
 8.Auto Buzzer
 9.Print Speed
Select and then Enter...

Enter : Press the feed button once for
        more than 1second.
Select: Press the feed button many times
        less than 1second as menu number.
Exit  : Turn power off then on.
```

Press the FEED button more than 1 seconds to confirm (Enter) less than 1 seconds to select menu. For example, if you'd like to change the Auto Melody option in the list number 6, press the FEED button less than 1 seconds 6 times, and more than 1 seconds 1 time. When terminating the configuration, just turn off and back on.

3)Continuing from the previous, you can confirm after selecting the category on the printed list.

```
Ex) [Baud rate]
-> 1.9600
    2.19200
    3.38400
    4.115200

-> : Indicate current set status
Select and then Enter...
```

Meaning, (->) indicates the current setting. When changing the settings, select from the list and if you want to move to the next menu without making any changes, then just confirm without selecting from the list.

4)Subsequently, you can then learn the results of the change in the printed paper.

**It was changed successfully!**

Indicates that the changes were made without a problem.

**The value is invalid, try again!**

Displayed when the selected item is invalid or moved to another menu without changing the item.

5) You may find the configuration results by checking the position of the arrow character (->), after printing the test page or entering preferences mode, by selecting one of the list

## 2-6) Memory Switch

Use non-volatile memory to set the function.

※Please use the provided 'Memory Switch Utility' for the setting.

※Once you've set the value, it will not reset even if you turn off the power so the value will maintain until you make the change.

Memory SW	Set Value	Description
SW1	Reserve	
SW2	Reserve	
SW3	Reserve	
SW4	Basic Code Page	Setting one of the Code Page out of the option to be a default
SW5	Basic Font	2byte code will set the default from Korean (24x24), Korean (16x16), Japanese(24x24), Chinese(24x24). 1byte code will set the default from ASCII(12x24), ASCII(8x16,9x16).
SW6	Reserve	
SW7	Reserve	
SW8	Reserve	

## 2)Memory Switch Modification Check

- ※After adjusting the memory switch, check the modified details by running a self test.  
When you turn on the power while holding down the FEED button, start self-test and stop printing.  
Press the FEED button one more time to display the contents of the memory switch.

```

3)CN3 : Serial Communication Connector

YMAW025-04R(Yunho) or 5268-04A(Molex)

--→ Housing : YMH025-04R(Yunho) or 5264-04A(Molex)

Pin	Circuit	Note
1	TxD	
2	RxD	
3	RTS or DTR	
4	GND	

※Refer to Interface Specification in page 16 for the connecting method.

4)CN4 : USB Communication Connector(Optional)

USB MINI-B type

Pin	Circuit	Note
1	Vcc	5V
2	D-	Data-
3	D+	Data+
4	NC	Not Connected
5	GND	

### 3.Specification

#### 3-1) Printer Specification

- 1) Print Mode : Direct Thermal
- 2) Resolution : 203dpi, 1dot=0.125mm, 8dot/mm
- 3)Total Dot Number : 384dot/line
- 4)Print Speed(Max) : 90mm/sec(Max,8.5V,Approximately 1 head starndard)
- 5)Print Width : 48mm
- 6)Paper Width : 58mm
- 7)Paper Diameter (pi): 40 pi (Max)
- 8)1 row print maximum character allocation: 32 characters(12 x 24), 16characters(24 x 24)

#### 3-2)FONT

- 1)Alphanumeric : FONT A(8 x 22) 95 characters, FONT B(8 x 20)95 characters
- 2)Graphic Expansion Character : FONT A(8 x 22) 128 characters, FONT B(8 x 20)95 characters
- 3)International Character : 14types 37 characters(Korea, USA, France, Germany, England, Denmark 1, Sweden, Italy, Spain 1, Japan, Norway, Denmark 2, Spain 2, Latin America)
- 4)Korean : FONT A Gothic type(24 x 24), FONT B Gothic type(16 x 16,Option)

#### 3-3) Internal Buffer

Transmit Buffer : 4K Byte

#### 3-4) Power Specification

##### 1)Operating Voltage

Input Voltage	9V ~ 24V	
Internal Operating Voltage	8.5V	Head motor internal operating voltage
Logic Voltage	5V±5%	Logic Circuit

##### 2)Current Consumption

Average : 1.5A(On Print rate 12.5%)

Peak : 3.7A(When operating approximately 5 heads), 18.6A(When operating approximately 1 head)

#### 3-5)Operating Temperature / Humidity

1)Temperature : 0 ~ 40 °C

2)Humidity : 40 ~ 50%RH

※Print Quality may subject to change with the condition above.

#### 3-6)MCBF

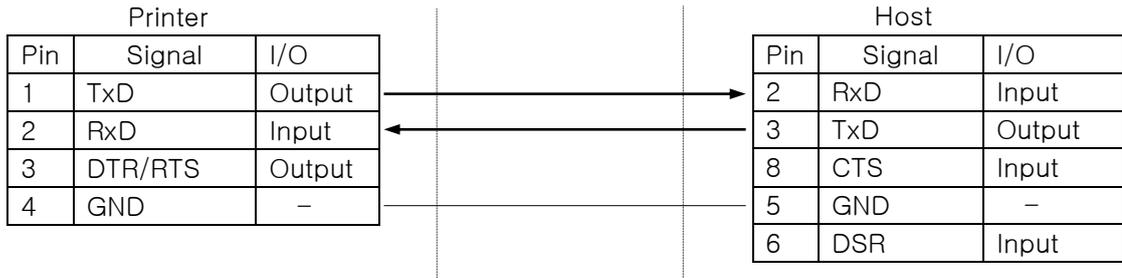

1)Mechanism : 15,000,000 Lines.

2)Thermal Head : 50Km, 100 million pulse.

## 4.Interface Specification

### 4-1) RS-232C / TTL

- 1)Data Transfer Methods : Serial
- 2)Hand Shake : Hardware (RTS/CTS or DTR/DSR)
- 3)Baud Rate : 9600, 19200, 38400, 57600 BPS
- 4)Data Bit : 8비트
- 5)Parity : None, Odd, Even
- 6)Stop Bit : 1 or 1.5 or 2비트
- 7)Connector : YMAW025-04R(Yunho) or 5268-04A(Molex)

.....▶ (Dotted Line): Connect depending on Host.

### 4-2) USB

- 1)Standard : USB 2.0 Compatible, Full Speed(12Mb) Response
- 2)Connector : Type MINI-B
- 3)Cable : USB2.0 standard cable
- 4)Data Method : Bulk IN, Bulk OUT
  - Bulk IN : End point 6,
  - Bulk OUT : End point 2
  - Full Speed : Max Packet Size 64 Byte(Bulk OUT),64 Byte(Bulk IN)

## CR

[Function]	Print and carriage return	
[Code]	ASCII	CR
	Hex	0Dh
	Decimal	13
[Range]	-	
[Description]	Equal to LF.	

## LF

[Function]	Print and line feed	
[Code]	ASCII	LF
	Hex	0Ah
	Decimal	10
[Range]	-	
[Description]	①STANDARD MODE: After printing the data and go to return accordingly to fixed data. ②PAGE MODE: Only the fixed data can be conducted, according to the fixed data.	
[Caution]	The LF is ignored behind of CR	

## CAN

[Function]	Cancel print data in page mode	
[Code]	ASCII	CAN
	Hex	18h
	Decimal	24
[Range]	-	
[Description]	The print data will be deleted in print area	

## HT

[Function]	Horizontal tab	
[Code]	ASCII	HT
	Hex	09h
	Decimal	9
[Range]	-	
[Description]	Moves the print position to the next tab position	
[Caution]	Horizontal tab positions are to set in ESC+ 'D'+ n.	

## FF

[Function]	Print and return to standard mode and page mode	
[Code]	ASCII	FF
	Hex	0Ch
	Decimal	12
[Range]	-	
[Description]	Print the data in the print buffer and returns to standard mode	
[Caution]	When it does not return to STANDARD MODE then use ESC+ FF.	

## SUB+ 'x'+ n

[Function]	Extension Graphic Mode, Korean Mode			
[Code]	ASCII	SUB	x	n
	Hex	1A	78h	n
	Decimal	26	120	n
[Range]	0≤n≤1			
[Initial Value]	n=0			
[Description]	n=0 : Korean Mode, First code is A1h more, automatically transfer Korean in 2 bytes			
	n=1 : Extension Graphic Mode, Every code setting is in 1 byte Extension Graphic font will be printed			

## SUB+ 'p'+ n

[Function]	Offline printing in paper detection			
[Code]	ASCII	SUB	p	n
	Hex	1A	70h	n
	Decimal	26	112	n
[Range]	0≤n≤1			
[Initial Value]	n=1			
[Description]	n=0 : Does not transition to offline when paper is empty (data communication available)			
	n=1 : Transition to offline when paper is empty (data communication not available)			

## SUB+ 'R'+ n

[Function]	Set the character outline			
[Code]	ASCII	SUB	b	n
	Hex	1A	52h	n
	Decimal	26	82	n
[Range]	0≤n≤1			
[Description]	n=0 : cancel outline (border) of character in tetragon.			
	n=1 : Set outline (border) of character in tetragon.			
[Caution]	When expanding in horizontal it is effective up to 8 times, however It is only effective up to 2 times for vertical expansion.			

[Name] 2 dimension barcode (2D)

[Format] ASCII SUB B n1 n2 n3 d1.....dk

Hex 1A 42h n1 n2 n3 d1.....dk

Decimal 26 66 n1 n2 n3 d1.....dk

[Range] Please refer to the following table.

[Descript] Please use the barcode according to the number of data.

n1 : Type of 2D barcode

n2 : Number of data

n3 : Size of barcode

d1... dk : Barcode data

n1	Type of 2D barcode
1	PDF417
2	QR code

## 1) PDF417

n2	Number of data
	$1 < n2 \leq 255$

n3	Size of barcode
3	Horizontal 3
4	Horizontal 4
5	Horizontal 5
6	Horizontal 6
7	Horizontal 7
8	Horizontal 8
9	Horizontal 9

## 2)QR code

n2	Number of data
n3=1	$1 < n2 \leq 17$
n3=3	$1 < n2 \leq 53$
n3=5	$1 < n2 \leq 106$
n3=9	$1 < n2 \leq 230$

n3	Size of barcode
1	Version 1
3	Version 3
5	Version 5
9	Version 9

※PDF417 Vertical size automatic setting.

## SUB+'1'

[Name] Choice of rule 1  
[Format] ASCII SUB 1  
Hex 1A 31h  
Decimal 26 49  
[Descript] Choose the rule 1 of two rules (rule1 or rule2).

## SUB+'2'

[Name] Choice of rule 2  
[Format] ASCII SUB 1  
Hex 1A 32h  
Decimal 26 50  
[Descript] Choose the rule 2 of two rules (rule1 or rule2).

## SUB+'W'+nL+nH+kL+kH

[Name] Writing the rule data  
[Format] ASCII SUB W nL nH kL kH  
Hex 1A 57h nL nH kL kH  
Decimal 26 87 nL nH kL kH  
[Range]  $0 \leq nL + nH \times 256 \leq 448$ , ( $0 \leq nL \leq 255$ ,  $0 \leq nH \leq 3$ )  
 $0 \leq kL + kH \times 256 \leq 448$ , ( $0 \leq kL \leq 255$ ,  $0 \leq kH \leq 3$ )  
[Descript] It writes 1 from nL+nHx256 to kL+kHx256.  
[Caution] If the range is exceed, the data will be ignored.  
If the writing is set up, the data is not erased, until you do power off or you receive the command (the rule clear).

## SUB+'C'

[Name] Rule CLEAR  
[Format] ASCII SUB C  
Hex 1A 43h  
Decimal 26 67  
[Descript] It clears all of data (as) zero you choosed.  
[Caution] Please use this command, once you do rewrite the rule data.  
If you need to speed up the processing, you use the command on/off.

## SUB+'O'

[Name] Rule ON  
[Format] ASCII SUB O  
Hex 1A 4Fh  
Decimal 26 79  
[Descript] Once you set up the command, the rull will be printing with the character or font..

## SUB+'F'

[Name] Rule OFF  
[Format] ASCII SUB O  
Hex 1A 46h  
Decimal 26 70  
[Descript] Once you set up the command, the rull will be preserved.

## SUB+'P'

[Name] Printing a dot of Rule.  
[Format] ASCII SUB P  
Hex 1A 50h  
Decimal 26 80  
[Descript] It's printing a dot of rule 1.  
[Caution] Please do not use this command if you print the character or the graphic.  
Please use the Rule ON if you print the character or the graphic.  
Please use this command if you print the rule between row and row at the space.

ESC+ 'D'+ n1...nk+ NUL

[Function] Sets the horizontal position  
 [Code] ASCII ESC D n1...nk NUL  
 Hex 1B 44h n1...nk 00  
 Decimal 27 68 n1...nk 0  
 [Range]  $1 \leq n \leq 255, 0 \leq k \leq 32$   
 [Description] Sets the horizontal tab position.  
 [Caution] n: indicates the figures from the initial position of the line to the set position.  
 k: indicates the total tabs per line.

ESC+ SP+ n

[Function] Set the space amount on the right of ASCII character  
 [Code] ASCII ESC SP n  
 Hex 1B 20h n  
 Decimal 27 32 n  
 [Range]  $0 \leq n \leq 255$   
 [Initial Value] n=0  
 [Description] Set in n x 0.125mm the space amount on the right side of ASCII character  
 [Caution] Set the Korean space in FS+ 'S'+ n.

ESC+ '!'+ n

[Function] Set character all at once  
 [Code] ASCII ESC ! n

## GS+'r'+n

[Name]	Transmit status			
[Format]	ASCII	GS	r	n
	Hex	1D	72h	n
	Decimal	29	114	n
[Range]	n=1			
[Descript.]	Transmit current status of printer			
[Caution]	The status is not ready till the printer is offline, If the receiver buffer is full at the printer offline, this command is not able to receive, and is not able to respond to the status. Therefore we recommend the real time command (DLE+EOT)..			

[Name] Enable / Disable automatic status back (ASB)  
 [Format] ASCII GS a n  
 Hex 1D 61h n  
 Decimal 29 97 n  
 [Range]  $0 \leq n \leq 1$   
 [Initial Value] n=1  
 [Descript] Enable / Disable ASB  
 If the status is changed after checking the printer status,  
 the status is automatically executed.  
 This command is executed to enable or disable.

**DLE+ENQ+n**

[Name] Raltime buffer clear, or reset.  
 [Format] ASCII DLE ENQ n  
 Hex 10h 05h n  
 Decimal 16 5 n

[Range] n=2,3

1)n=2

[Descript] The realtime will clear each buffer of the printer, as soon as this command is conducted.

[Caution] It is only valid, once the DIP SW1 is \*up. \*up : on.  
 If the offline is valid, and the printer receive the data same with this command, The printer will be working the same with this comand. (Bit image, Data.)  
 You don't need to be caution,once this command will be invalid if it's online.

2)n=3

[Descript] The realtime will reset the printer, as soon as this command is conducted.

[Range] It is only valid, once the DIP SW1 is \*up. \*up : on.  
 The command ESC+@ will be reset.

However, it doesn't work at the paper jam, cutting jam, has to reset compulsory.

**DLE+EOT+n**

[Name] Realtime status transmission  
 [Format] ASCII DLE EOT n  
 Hex 10h 04h n  
 Decimal 16 4 n

[Range] n=2

[Descript] The realtime send a byte of printer status, when this command is conducted.

[Caution] **It is only valid, once the DIP SW1 is \*up. \*up : on.**  
 Please refer to the table of the printer status.  
 If the offline is valid, and the printer receive the data same with this command, The printer will be working the same with this comand. (Bit image, Data.)

## 6. Windows Driver

### 6-1) Printer Configuration Settings

- 1) Please open the screen of printer / fax, and click the basic setting (I) of the general tap.
- 2) Please click Advanced Tab(V).
- 3) Please refer to the following images, and set up each details. You can select on each dropdown list to set the Density, Cutting Option, and Print Speed Setting.

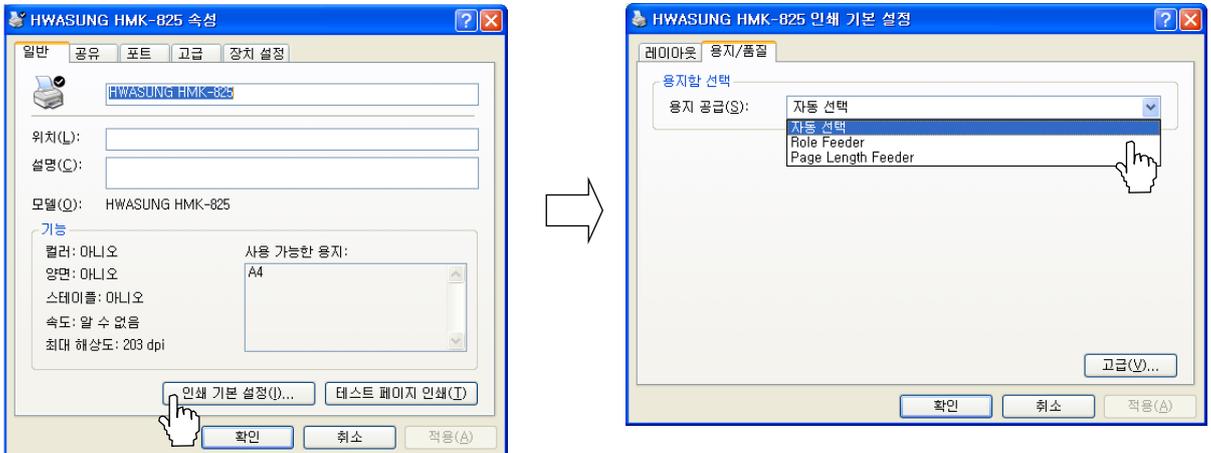

No Cut : No Cut, just Print.  
 Full Cut : Full Cut after print.  
 Partial Cut : Partial Cut after print.  
 Black Mark Search(Full Cut) :  
 The cutting position from the black mark  
 will be set by the memory switch.

※All printed materials would be different  
 depending on the print data size due to  
 printing in graphic, so by fixing the setting  
 to the below set may provide a smoother  
 quality.  
 Print Width 60mm: Set the speed to 150mm.  
 80mm: Set the speed to 130mm.

## 4-2) Paper Feed Setting

Please set the form feeding after printing.

- 1) Open the Printer and Fax folder, then click on the Basic Setting (I) under General tab.
- 2) Please click the paper /quality tab, and select from the Paper Feed dropdown list.

- 3) Auto Select / Role Feeder : : After printing, the form feeding is not conducted any more regardless of the paper length. This setting is used when the printed material length is irregular.

As you can see from the example below, the feeding will not happen even if you set the margin through the Visual Basic, so you'd have to set the FontSize smaller and print "." to set the cutting position through Dummy Form Feeding.

Example)

'----- Example Dummy form feeding to cutting position -----'

```
Printer.Print " " & vbLf
Printer.Print " " & vbLf
Printer.Print " " & vbLf
```

```
Printer.FontSize = 2
Printer.Print "." ' dummy print for form feeding
Printer.EndDoc
```

- 4) page length Feeder : After print, execute form feeding up to the set page length.  
Set when the printed materials are fixed to a certain length.

### 6-3) New Paper Settings

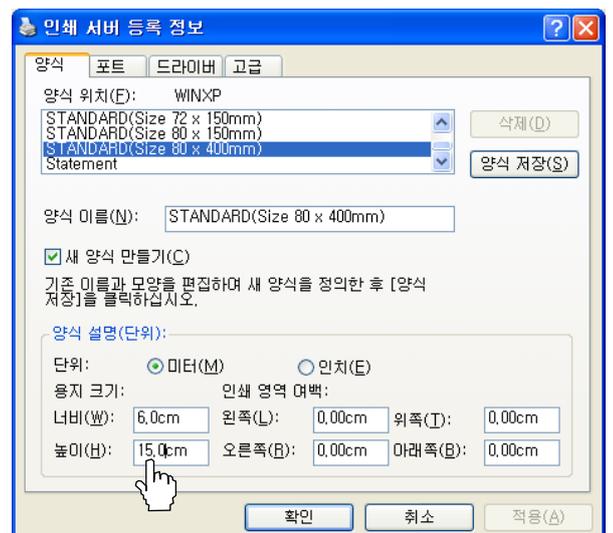

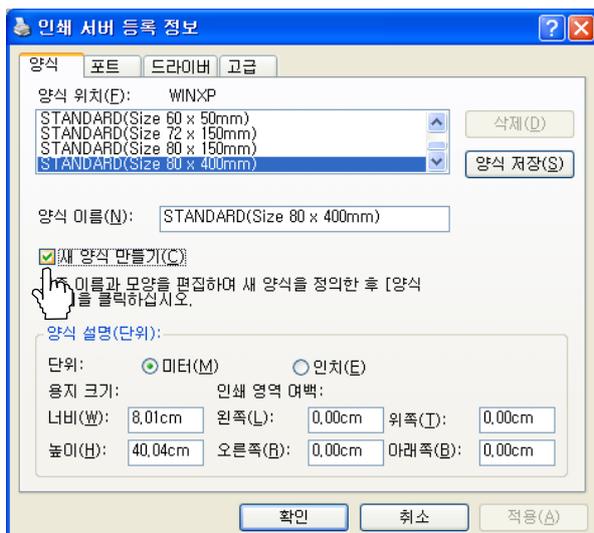

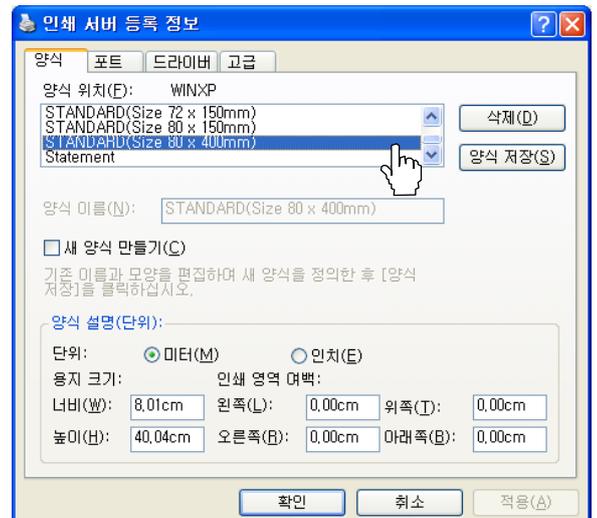

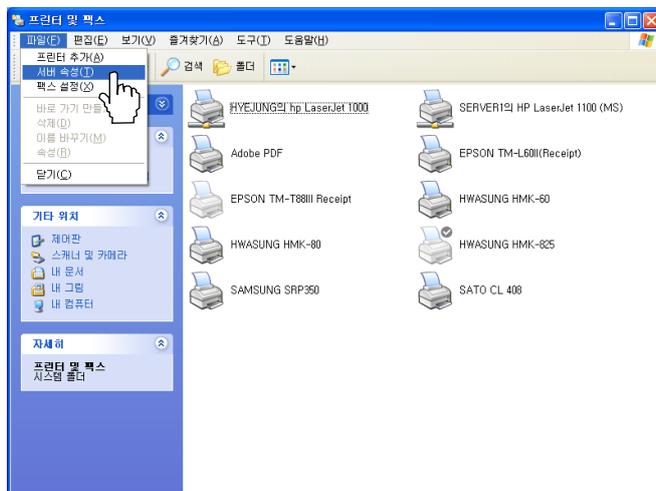

You can use the custom user paper size.

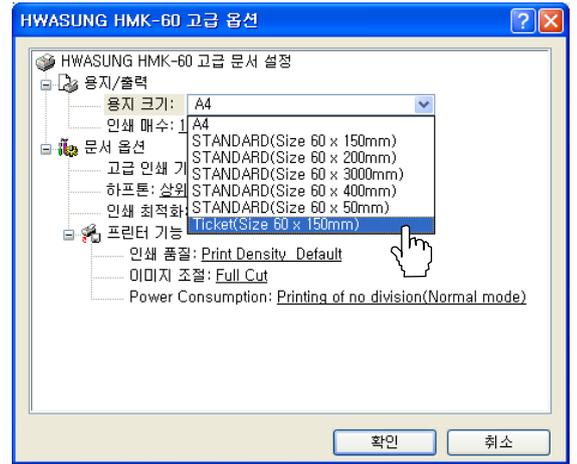

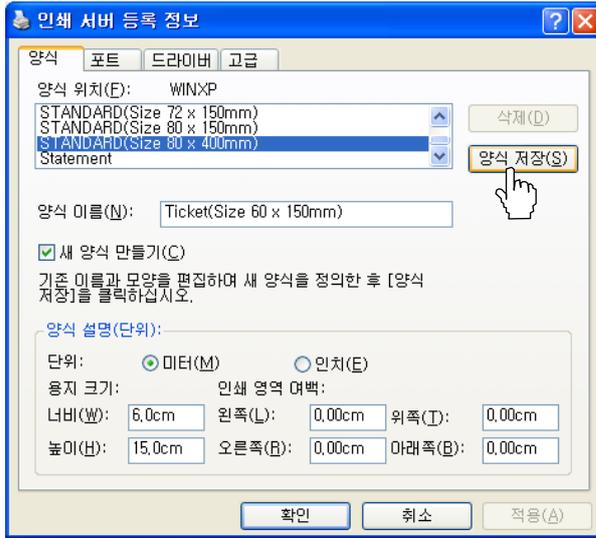

Below is the example of making 60mm x 150mm sized paper.

- 1) Open the Printer and Fax Screen, then click on the server property under File Menu.
- 2) Select the STANDARD(Size 80 x 400mm) from Form Location.
- 3) Check the "Create New Form" box.
- 4) Click the paper size field and input 6.0cm (W), 15.0cm(H).

Make sure to make no changes in the print area margin.

- 5) Save the form after creating a custom name for the size. (i.e, Ticket(Size 60 x 150mm)).
- 6) Go to Basic Print Setting -> Advance then Select the newly created Ticket(Size 60 x 150mm)

## 7. USB (User Interface)

Without using the Windows driver, you are able to check the printer status, and transmit / receive the data, by using USB Interface DLL (HwaUSB.DLL) and OCX driver (HwaUSB.OCX).

### 7-1) DLL Interface

Place the HwaUSB.DLL into the System32 folder or SysWow64 folder depending on your Operating System's bit version.

1) long UsbOpen(LPCTSTR SelPrinter);

Open the USB port to Printer Model "HPP-250".

- Parameters:  
SelPrinter : Printer Model Name
- Return :  
Open Normal : 0  
Open Error : -3(negative)

2) long PrintStr(LPCTSTR data);

Prints String.

- Parameters:  
data : String datas
- Return :  
Print Normal : 1  
Print Error : 0

※ To prevent the loss of data for the print timeout, please use the function 'NewRealRead' to check the status, and go to the next step, when it's normal.

3) long PrintCmd(unsigned char data);

Prints 1 byte of data. When printing big data spool, use the following PrintPacket Value to increase the transfer Speed.

- Parameters:  
data : 1 byte data (0~255)
- Return :  
Print Normal : 1  
Print Error : 0

4) long NewRealRead(void);

Reads 1 byte of print status data using USB port.

- Parameters:  
None
- Return :  
Read Normal : Print Status Value  
Read Error : -1(Negative)

 HWASUNG SYSTEM CO.,LTD	Title	Rev.	Page
	HPP-240	Ver1.0	P.53

5) long PrintPacket(unsigned char \*PacketBuf,unsigned long PacketLength);  
 The sending data buffer outputs a USB port for the specified data length.

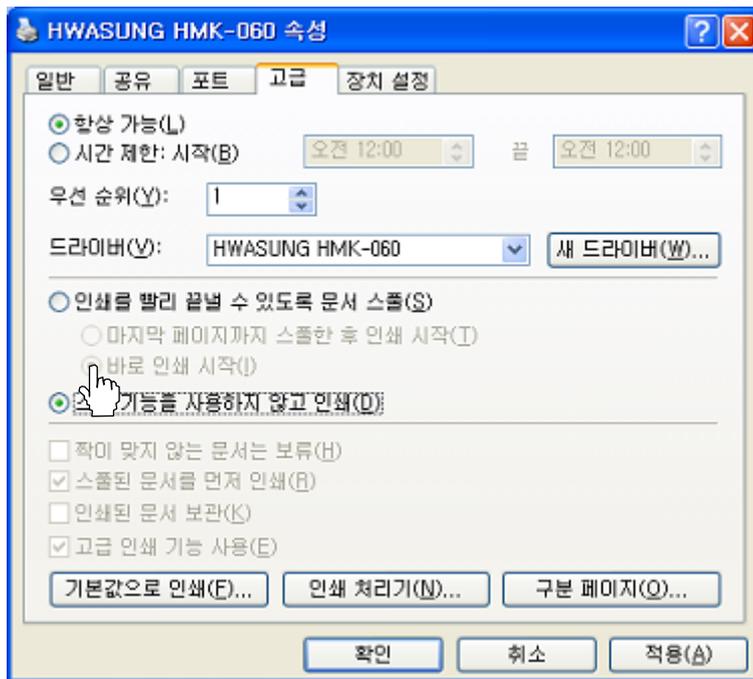

- Parameters:  
 PacketBuf : TransmitDataBuffer Pointer  
 PacketLength : Transmit data length (not to exceed up to 64 bytes)
- Return :  
 Normal Output : 1  
 Output Error : 0

- ※ Do not use functions other than those listed above as they are for debug.
- ※ For more information, download the sample program from our website.

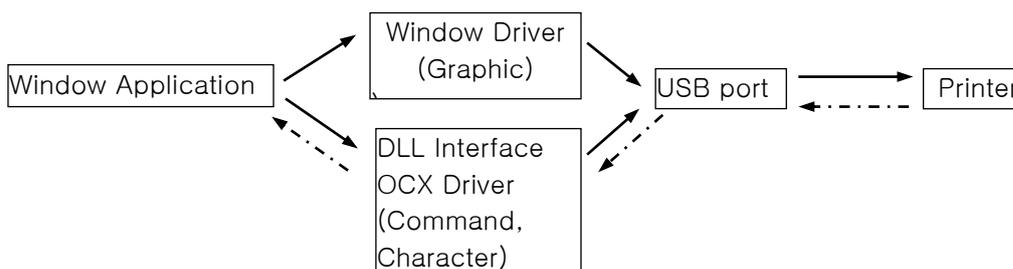

### 7-2) USB Cautionary Points when using the USB interface

When transmitting jointly with Windows driver with the USB interface, there are cases of data transmission does not complete in order due to the mixed signal from the windows driver data and the USB interface data. In this case, set it to 'without using Printer SpoolFunction' under the printer's property.

There won't be an error during the receiving because it would only work through USB interface when receiving.
